SUMM . . . gels, liquids (such as are suitable for roll-on products), and aerosols. The forms of these products may be suspensions or **emulsions**.
DETD . . . as described below. The internal phase is added to the external phase very slowly while stirring at to form an **emulsion**. After the addition has been completed, the mixture is stirred at higher speed to achieve a homogeneous mixture. The final formula viscosity is then achieved by homogenizing the **emulsion** under either batch or continuous process conditions as described below. The fragrance may be added at any time during the. . .
DETD Preparation of the **Emulsion**:

DETD An other method of homogenization of the final product is to pass the **emulsion** through a colloid mill such as a Sonic Tri-Homo Colloid Mill or a process sonolator such Sonic Production Sonolator 200-30. .
.
DETD . . . D5 cyclomethicone--elastomer described in U.S. Pat. No. 6,060,546). The Control Stick Example was Lady Speed Stick. The data shows that **emulsion** of the invention has conductivity as good as or better than the stick.

L18 ANSWER 1 OF 11 USPATFULL on STN
ACCESSION NUMBER: 2005:43242 USPATFULL
TITLE: Enhanced efficacy **antiperspirant** compositions containing strontium
INVENTOR(S): Shen, Yan-Fei, Canton, MA, UNITED STATES
PATENT ASSIGNEE(S): The Gillette Company (U.S. corporation)

	NUMBER	KIND	DATE	
PATENT INFORMATION:	US 2005036968	A1	20050217	
APPLICATION INFO.:	US 2003-641348	A1	20030814	(10)

DOCUMENT TYPE: Utility
FILE SEGMENT: APPLICATION
LEGAL REPRESENTATIVE: PATENT AND TRADEMARK COUNSEL, THE GILLETTE COMPANY, 800 BOYLSTON STREET, BOSTON, MA, 02199
NUMBER OF CLAIMS: 20
EXEMPLARY CLAIM: CLM-01-71
LINE COUNT: 772
CAS INDEXING IS AVAILABLE FOR THIS PATENT.
AB The present invention relates to enhanced efficacy **antiperspirant** salts containing strontium and an amino acid or a hydroxy acid and particularly to stabilized aqueous solutions of such salts. The present invention also embraces methods of making these **antiperspirant** salts and solutions and compositions containing same.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L18 ANSWER 2 OF 11 USPATFULL on STN
ACCESSION NUMBER: 2005:43241 USPATFULL
TITLE: Enhanced efficacy **antiperspirant** compositions containing strontium or calcium
INVENTOR(S): Allen, Jan L., Silver Spring, MD, UNITED STATES
Shen, Yan-Fei, Canton, MA, UNITED STATES
PATENT ASSIGNEE(S): The Gillette Company (U.S. corporation)

	NUMBER	KIND	DATE

NUMBER OF CLAIMS: 16
EXEMPLARY CLAIM: 1
LINE COUNT: 409
CAS INDEXING IS AVAILABLE FOR THIS PATENT.
AB Disclosed are enhanced efficacy **antiperspirant** compositions containing a strontium salt and/or a calcium salt. In particular, there is disclosed an **antiperspirant** composition comprising a dermatologically acceptable carrier vehicle, about 8% to about 22% (USP) of an aluminum-zirconium chlorohydrate-gly **antiperspirant** salt, wherein the **antiperspirant** salt has an **HPLC** peak 5 area of at least 33%, and about 0.5% to about 15%, preferably about 1% to about 6%, by weight, of a water soluble salt selected from the group consisting of a water soluble strontium salt, a water soluble calcium salt and a mixture thereof It has been found that the inclusion of a strontium salt and/or a calcium salt boosts the efficacy of a high peak 5 **antiperspirant** salt. As a preferred feature, the

antiperspirant salt and the water soluble salt are dissolved in at least a portion of the carrier vehicle.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed are enhanced efficacy aluminum-zirconium **antiperspirant** salt compositions that have a metal (Al+Zr) to chloride (or anion) ratio of about 0.90 to about 1.00. These salts also typically exhibit an **HPLC** peak 5 area content of about 33% or more, preferably at least 45%, more preferably at least 50%, most preferably at least 55%. Especially preferred are aluminum-zirconium **antiperspirant** salt compositions which, in addition to the aforementioned high peak 5 content, also exhibit an **HPLC** peak 4 to peak 3 area ratio of at least 0.4, preferably at least 0.7. Also disclosed are methods of making such **antiperspirant** salt compositions and aqueous solutions of such **antiperspirant** salt compositions. Further disclosed are topical compositions comprising a dermatologically acceptable carrier vehicle and a perspiration reducing effective amount of an aluminum-zirconium **antiperspirant** salt composition as described above.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L18 ANSWER 4 OF 11 USPATFULL on STN

LINE COUNT: 728
CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed is a non-flowable anhydrous topical **antiperspirant** composition comprising a first portion and a second portion contiguous with the first portion. The first portion is semi-opaque to opaque and comprises a first hydrophobic carrier vehicle and a first gellant and has a particulate **antiperspirant** active suspended therein. The second portion is translucent to transparent and comprises a second hydrophobic carrier vehicle and a second gellant. Preferably, the second hydrophobic carrier vehicle has an average refractive index that approximately matches the refractive index of the second gellant. Ideally, for greater translucency the second portion will be substantially free of **antiperspirant** salt and/or other opacifying materials. Preferably, the first hydrophobic carrier vehicle also has an average refractive index that approximately matches the refractive index of the first gellant. Even more preferably, the second hydrophobic carrier vehicle and second gellant are comprised of substantially the same materials in substantially the same proportions as the first hydrophobic carrier vehicle and first gellant.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention is directed to a clear **antiperspirant** or **deodorant** gel composition which exhibits reduced staining while retaining excellent aethetic attributes and efficacy. The gel composition is a **water**-in-**oil** emulsion having a viscosity of about 50,000 to 250,000 cP, preferably about 100,000 to 200,000 cP. The water phase comprises about 75 to 90% of the composition and contains a **deodorant** or **antiperspirant** effective amount (e.g. about 3 to 25%) of an **antiperspirant** active dissolved therein. The oil phase comprises about 10 to 25% of the composition and contains a silicone oil and a polyether substituted silicone emulsifying agent. The silicone oil comprises a mixture of a non-volatile silicone, preferably a non-volatile linear silicone, and a volatile linear silicone. It has been found that reducing the amount of non-volatile silicone in the known gel composition to a relatively low level (e.g. below about 5%) and adding an amount of volatile linear silicone to the composition (e.g. above about 2%, preferably above about 5%) substantially improves the non-staining properties of the composition.

LINE COUNT:	409

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed are enhanced efficacy **antiperspirant** compositions containing a strontium salt and/or a calcium salt. In particular, there is disclosed an **antiperspirant** composition comprising a dermatologically acceptable carrier vehicle, about 8% to about 22% (USP) of an aluminum-zirconium chlorohydrate-gly **antiperspirant** salt, wherein the **antiperspirant** salt has an **HPLC** peak 5 area of at least 33%, and about 0.5% to about 15%, preferably about 1% to about 6%, by weight, of a water soluble salt selected from the group consisting of a water soluble strontium salt, a water soluble calcium salt and a mixture thereof It has been found that the inclusion of a strontium salt and/or a calcium salt boosts the efficacy of a **high peak 5 antiperspirant** salt.

As a preferred feature, the **antiperspirant** salt and the water soluble salt are dissolved in at least a portion of the carrier vehicle.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed are enhanced efficacy aluminum-zirconium **antiperspirant** salt compositions that have a metal (Al+Zr) to chloride (or anion) ratio of about 0.90 to about 1.00. These salts also typically exhibit an **HPLC** peak 5 area content of about 33% or more, preferably at least 45%, more preferably at least 50%, most preferably at least 55%. Especially preferred are aluminum-zirconium **antiperspirant** salt compositions which, in addition to the aforementioned **high peak 5** content, also exhibit an **HPLC** peak 4 to peak 3 area ratio of at least 0.4, preferably at least 0.7. Also disclosed are methods of making such **antiperspirant** salt compositions and aqueous solutions of such **antiperspirant** salt compositions. Further disclosed are topical compositions comprising a dermatologically acceptable carrier vehicle and a perspiration reducing effective amount of an aluminum-zirconium **antiperspirant** salt composition as described above.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed is a non-flowable anhydrous topical **antiperspirant** composition comprising a first portion and a second portion contiguous with the first portion. The first portion is semi-opaque to opaque and comprises a first hydrophobic carrier vehicle and a first gellant and has a particulate **antiperspirant** active suspended therein. The second portion is translucent to transparent and comprises a second hydrophobic carrier vehicle and a second gellant. Preferably, the second hydrophobic carrier vehicle has an average refractive index that approximately matches the refractive index of the second gellant.

Ideally, for greater translucency the second portion will be substantially free of **antiperspirant** salt and/or other opacifying materials. Preferably, the first hydrophobic carrier vehicle also has an average refractive index that approximately matches the refractive index of the first gellant. Even more preferably, the second hydrophobic carrier vehicle and second gellant are comprised of substantially the same materials in substantially the same proportions as the first hydrophobic carrier vehicle and first gellant.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L7 ANSWER 1 OF 1 USPATFULL on STN
PI US 5534246 19960709 <--
SUMM . . . Topically-delivered active compounds, such as an antiperspirant compound, skin care compound or topical medicament, conventionally have been prepared as either **oil**-in-**water** emulsions or water-in-oil emulsions. However, prior topically-effective compositions prepared as emulsions typically felt wet when applied to the skin. In. . .
SUMM . . . or suspensions. Emulsified antiperspirant compositions of these various forms are well-known in the cosmetic art. Antiperspirant compositions prepared as either **oil**-in-**water** emulsions or water-in-oil emulsions typically have a milky or opaque appearance and are manufactured by complex methods. An ideal emulsified. . .
SUMM . . . include a water phase and an oil phase. The oil phase often is suspended in the water phase (i.e., an **oil**-in-**water** emulsion) by using a sufficient amount of an appropriate emulsifier or emulsifiers. **Oil**-in-**water** emulsion products have a wet feel because the continuous external phase is aqueous. Water-in-oil emulsions, wherein the continuous external phase. . .
SUMM GB 2,079,300 discloses transparent silicone-containing **oil**-in-**water** emulsions prepared by the addition of a polyol. The emulsions include high HLB surfactants. U.S. Pat. No. 4,784,844 discloses **oil**-in-**water** opaque to transparent silicone emulsions including up to 80% internal phase. Other patents disclosing silicone-containing **oil**-in-**water** emulsions include U.S. Pat. Nos. 4,122,029, 4,732,754, and 5,162,378. Patents disclosing silicone surfactants used in topically-effective compositions include U.S. Pat.. . .
SUMM . . . antiperspirant compounds known in the art, such as the astringent salts. The astringent salts include organic and inorganic salts of **aluminum**, zirconium, zinc, and mixtures thereof. The anion of the astringent salt can be, for example, sulfate, chloride, chlorohydroxide, alum, formate, lactate, benzyl sulfonate or phenyl sulfonate. Exemplary classes of antiperspirant astringent salts include **aluminum** halides, **aluminum** hydroxyhalides, zirconyl oxyhalides, zirconyl hydroxyhalides, and mixtures thereof.
SUMM Exemplary **aluminum** salts include **aluminum** chloride and the **aluminum** hydroxyhalides having the general formula Al.sub.2 (OH).sub.x Q.sub.y.XH.sub.2 O, wherein Q is chlorine, bromine or iodine; x is about 2. . .
SUMM The antiperspirant compounds are water-soluble. Exemplary antiperspirant compounds therefore include, but are not limited to, **aluminum** bromohydrate, potassium alum, sodium **aluminum** chlorohydroxy lactate, **aluminum** sulfate, **aluminum** chlorohydrate, **aluminum**-zirconium tetrachlorohydrate, an **aluminum** -zirconium polychlorohydrate complexed with glycine, **aluminum** -zirconium trichlorohydrate, **aluminum**-zirconium

octachlorohydrate, **aluminum** sesquichlorohydrate, **aluminum** sesquichlorohydrex PG, **aluminum** chlorohydrex PEG, **aluminum** zirconium octachlorohydrex glycine complex, **aluminum** zirconium pentachlorohydrex glycine complex, **aluminum** zirconium tetrachlorohydrex glycine complex, **aluminum** zirconium trichlorohydrex glycine complex, **aluminum** chlorohydrex PG, zirconium chlorohydrate, **aluminum** dichlorohydrate, **aluminum** dichlorohydrex PEG, **aluminum** dichlorohydrex PG, **aluminum** sesquichlorohydrex PG, **aluminum** chloride, **aluminum** zirconium pentachlorohydrate, and mixtures thereof. Numerous other useful antiperspirant compounds are listed in WO 91/19222 and in the Cosmetic and. . .

SUMM Preferred antiperspirant compounds are the **aluminum**-zirconium chlorides complexed with an amino acid, like glycine, and the **aluminum** chlorohydrates. Preferred **aluminum**-zirconium chloride glycine complexes have an **aluminum** (Al) to zirconium (Zr) ratio of about 1.67 to about 12.5, and a total metal (Al+Zr) to chlorine ratio (metal. . .

SUMM . . . zinc-neomycin sulfate-hydrocortisone, chloramphenicol, methylbenzethonium chloride, and erythromycin and the like; antiparasitics, such as lindane; deodorants, such as chlorophyllin copper complex, **aluminum** chloride, **aluminum** chloride hexahydrate, and methylbenzethonium chloride; essentially all dermatologicals, like acne preparations, such as benzoyl peroxide, erythromycin-benzoyl peroxide, clindamycin phosphate, 5,7-dichloro-8-hydroxyquinoline,. . .

DETD . . . by weight of the total composition, all percents set forth the amount of each ingredient present in the composition;

.sup.2) **aluminum** chlorohydrate (ACH), available commercially as CHLOROHYDROL, from Reheis, Inc. Berkeley Heights, New Jersey, added as a 50% weight percent solution. . .

CLM What is claimed is:

7. The composition of claim 1 wherein the antiperspirant compound is an astringent salt comprising **aluminum**, zirconium, zinc or a mixture thereof.

8. The composition of claim 1 wherein the antiperspirant compound is selected from the group consisting of **aluminum** bromohydrate, potassium alum, sodium **aluminum** chlorohydroxy lactate, **aluminum** sulfate, **aluminum** chlorohydrate, **aluminum**-zirconium tetrachlorohydrate, an **aluminum** -zirconium polychlorohydrate complexed with glycine, **aluminum** -zirconium trichlorohydrate, **aluminum**-zirconium octachlorohydrate, **aluminum** sesquichlorohydrate, **aluminum** sesquichlorohydrex PG, **aluminum** chlorohydrex PEG, **aluminum** zirconium octachlorohydrex glycine complex, **aluminum** zirconium pentachlorohydrex glycine complex, **aluminum** zirconium tetrachlorohydrex glycine complex, **aluminum** zirconium trichlorohydrex glycine complex, **aluminum** chlorohydrex PG, zirconium chlorohydrate, **aluminum** dichlorohydrate, **aluminum** dichlorohydrex PEG, **aluminum** dichlorohydrex PG, **aluminum** sesquichlorohydrex PG, **aluminum** chloride, **aluminum** zirconium pentachlorohydrate, and mixtures thereof.

. . . said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound comprising **aluminum** chlorohydrate and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising. . .

L7 ANSWER 1 OF 1 USPATFULL on STN

CLM What is claimed is:

1. An emulsified, water-in-oil antiperspirant composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 10 or less and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene glycol ether of sorbitol, and mixtures thereof.

2. The composition of claim 1 further comprising a refractive index-adjusting compound to match the refractive index of the aqueous phase to the refractive index of the organic phase and provide a transparent composition.

3. The composition of claim 2 wherein the composition has a % of transmittance at 700 nm of at least 50%.

4. The composition of claim 1 wherein the composition is a liquid or a flowable semisolid having a viscosity of about 1,000 to about 100,000 centipoise.

5. The composition of claim 1 wherein the antiperspirant compound is present in an amount of about 5% to about 30% by weight of the composition.

6. The composition of claim 1 wherein the antiperspirant compound is present in an amount of about 10% to about 25% by weight of the composition.

7. The composition of claim 1 wherein the antiperspirant compound is an astringent salt comprising **aluminum**, zirconium, zinc or a mixture thereof.

8. The composition of claim 1 wherein the antiperspirant compound is selected from the group consisting of **aluminum** bromohydrate, potassium alum, sodium **aluminum** chlorohydroxy lactate, **aluminum** sulfate, **aluminum** chlorohydrate, **aluminum**-zirconium tetrachlorohydrate, an **aluminum** -zirconium polychlorohydrate complexed with glycine, **aluminum** -zirconium trichlorohydrate, **aluminum**-zirconium octachlorohydrate, **aluminum** sesquichlorohydrate, **aluminum** sesquichlorohydrex PG, **aluminum** chlorohydrex PEG, **aluminum** zirconium octachlorohydrex glycine complex, **aluminum** zirconium pentachlorohydrex glycine complex, **aluminum** zirconium tetrachlorohydrex glycine complex, **aluminum** zirconium trichlorohydrex glycine complex, **aluminum** chlorohydrex PG, zirconium chlorohydrate, **aluminum** dichlorohydrate, **aluminum** dichlorohydrex PEG,

aluminum dichlorohydrex PG, **aluminum** sesquichlorohydrex PG, **aluminum** chloride, **aluminum** zirconium pentachlorohydrate, and mixtures thereof.

9. The composition of claim 1 wherein the organic phase is present in an amount of about 2% to about 20% by weight of the composition.

10. The composition of claim 1 wherein the volatile silicone compound has a viscosity of about 0.5 to about 6 centistokes.

11. The composition of claim 1 wherein the volatile silicone compound comprises a cyclic volatile silicone having a viscosity at 25° C. of about 2 to about 6 centistokes and a boiling point at 760 mm of about 150° C. to about 250° C.

12. The composition of claim 11 wherein the cyclic volatile silicone is a cyclomethicone.

13. The composition of claim 12 wherein the cyclomethicone is selected from the group consisting of hexamethylcyclotrisiloxane, octamethylcyclotetrasiloxane, decamethylcyclopentasiloxane, dodecamethylcyclohexasiloxane, and mixtures thereof.

14. The composition of claim 1 wherein the volatile silicone compound comprises a linear volatile silicone having a viscosity at 25° C. of about 0.5 to about 5 centistokes and a boiling point at 760 mm of about 100° C. to about 250° C.

15. The composition of claim 14 wherein the linear volatile silicone is selected from the group consisting of hexamethyldisiloxane, octamethyltrisiloxane, decamethyltetrasiloxane, dodecamethylpentasiloxane, bisphenylhexamethicone, and mixtures thereof.

16. The composition of claim 1 wherein the volatile hydrocarbon compound has about 10 to about 30 carbon atoms.

17. The composition of claim 16 wherein the volatile hydrocarbon compound has about 12 to about 24 carbon atoms and has a boiling point at 760 mm of about 100° C. to about 250° C.

18. The composition of claim 1 wherein the volatile hydrocarbon compound has the structural formula: ##STR2## wherein n ranges from 2 to about 5, and mixtures.

19. The composition of claim 1 wherein the organic phase further comprises a nonvolatile organic compound.

20. The composition of claim 19 wherein the nonvolatile organic compound is selected from the group consisting of a mineral oil, phenyltrimethicone, a polydimethylsiloxane having a viscosity at 25° C. of about 6 to about 400 cs, an ester having about 10 to about 32 carbon atoms, 1-decene dimer, a polydecene, isoeicosane, a hydrogenated polybutene, and mixtures thereof.

21. The composition of claim 1 wherein the surfactant phase is present in an amount of about 0.1% to about 10% by weight of the composition.

22. The composition of claim 1 wherein the surfactant phase is present in an amount of about 0.5% to about 5% by weight of the composition.

23. The composition of claim 1 wherein the surfactant phase has an HLB

value of about 0.1 to about 10.

24. A method of treating or preventing malodors associated with human perspiration comprising topically applying an effective amount of an antiperspirant composition to human skin, said composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 10 or less and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene glycol ether of sorbitol, and mixtures thereof.

25. An emulsified, water-in-oil antiperspirant composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 1 to about 7 and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene glycol ether of sorbitol, and mixtures thereof.

26. An emulsified, water-in-oil antiperspirant composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 10 or less and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene glycol ether of sorbitol, and mixtures thereof; and (d) an oil-soluble refractive index-adjusting compound to match the refractive index of the aqueous phase to the refractive index of the organic phase and provide a transparent composition.

27. An emulsified, water-in-oil antiperspirant composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound comprising **aluminum** chlorohydrate and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising

cyclomethicone; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of laureth-1.

28. The composition of claim 25 wherein the surfactant phase has an HLB value of about 3 to about 6.

29. The composition of claim 1 wherein the surfactant phase consists essentially of a single silicon-free surfactant having an HLB value of about 0.1 to about 10.

30. The composition of claim 1 wherein the surfactant phase consists essentially of a silicon-free surfactant blend having an HLB value of about 1 to about 10, said surfactant blend comprising a first surfactant having an HLB value of about 0.1 to about 10 and a second surfactant having an HLB greater than about 10.

31. The composition of claim 1 wherein the surfactant phase is selected from the group consisting of laureth-1, laureth-2, laureth-3, laureth-4, oleth-2, steareth-3, steareth-2, ceteth-2, oleth-3, an ethoxylated nonylphenol, ethoxylated octylphenol, ethoxylated dodecylphenol, ethoxylated fatty (C.sub.6 -C.sub.22) alcohol having 4 or fewer ethylene oxide moieties, and mixtures thereof.

32. The composition of claim 1 wherein the organic phase comprises a volatile silicone compound and the surfactant phase consists essentially of a silicon-free surfactant having a hydrophobic moiety having about 10 to about 14 carbon atoms.

33. The composition of claim 2 wherein the refractive index-adjusting compound is water soluble.

34. The composition of claim 31 wherein the water-soluble refractive index-adjusting compound is selected from the group consisting of calcium chloride, sodium chloride, zinc chloride, potassium iodide, zinc phenylsulfonate, a sugar, and mixtures thereof.

35. The composition of claim 26 wherein the oil-soluble refractive index-adjusting compound comprises a phenyltrimethicone.

36. The composition of claim 27 wherein calcium chloride is added to the aqueous phase to match the refractive index of the aqueous phase to the refractive index of the organic phase.

37. An emulsified, water-in-oil topically-effective composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising: (i) a topically-effective amount of a topically-active compound, and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 10 or less and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene glycol ether of sorbitol, and mixtures thereof.

38. The composition of claim 37 wherein the topically-active compound is present in an amount of 0.1% to about 40% by weight of the composition.

39. The composition of claim 38 wherein the topically-active compound is selected from the group consisting of a skin care agent, a topical medicament, a topically-effective drug, a topical anesthetic, a sunscreen agent, a topical cosmetic, a topical anti-inflammatory, an antibacterial compound, a dermatological compound, an antifungal compound, and mixtures thereof.

40. An emulsified water-in-oil topically-effective composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising: (i) a topically-effective amount of a first topically-active compound, and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising: (i) a topically-effective amount of a second topically-active compound, and (ii) a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 10 or less and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene glycol ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene ether of sorbitol, and mixtures thereof; and (d) a refractive index-adjusting compound to match the refractive index of the aqueous phase to the refractive index of the organic phase and provide a transparent composition.

41. An emulsified, water-in-oil topically-effective composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising: (i) a topically-effective amount of a topically-active compound, and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a surfactant or a surfactant blend, wherein the surfactant or surfactant blend has an HLB value of about 10 or less and is free of silicon, and wherein the surfactant phase comprises a nonionic surfactant selected from the group consisting of a polyoxyethylene ether of a fatty (C.sub.6 -C.sub.22) alcohol, an ethoxylated alkylphenol, a polyethylene glycol ether of methyl glucose, a polyethylene glycol ether of sorbitol, and mixtures thereof; and (d) a refractive index-adjusting compound to match the refractive index of the aqueous phase to the refractive index of the organic phase and provide a transparent composition.

42. An emulsified, water-in-oil antiperspirant composition comprising: (a) about 65% to about 99.5% by weight of the composition of an aqueous phase, said aqueous phase comprising (i) about 1% to about 40% by weight of the composition of an antiperspirant compound and (ii) water; (b) about 0.5% to about 35% by weight of the composition of an organic phase comprising a volatile silicone compound, a volatile hydrocarbon compound, or a mixture thereof; and (c) about 0.1% to about 15% by weight of the composition of a surfactant phase consisting essentially of a silicon-free surfactant blend having an HLB value of about 1 to about 10, said surfactant blend comprising a first surfactant having an HLB value of about 0.1 to about 10 and a second surfactant having an HLB greater than about 10.

43. An emulsified, water-in-oil topically-effective composition
